

# DOG PICK UP BAGS

## The Good, Bad & Ugly!

Plant-based plastics are the future for single use for doggy doo! **No bags is even better!**

### Super Good

Find a re-useable container to scoop and carry dog poop to your home compost, loo, or organics pick up service

### Good

**Bio-based bags** made from organic renewable sources (eg organic waste or corn, rice and wheat crops) and if certified compostable, break down easily and quickly into water, carbon and humus.

### Bad

**Fossil-based bags** are made from non-renewable materials. Their very rigid polymer chains take many years to break down, meanwhile contaminating soil.

### Ugly

**Oxydegradable bags** have a huge negative environmental impact, are oil loving which attracts toxins to attach to them, they're now banned in many countries.

**Certified Compostable** - a standard for disintegration amount & time, biodegradation amount & time, no heavy metal or fluorinated chemicals & no plant toxicity or soil invertebrate toxicity.

In landfill, dog poop in compostable bags lack oxygen and moisture to breakdown rapidly!
